

You hold a degree in informatics and ideally have professional experience with Spring and React? If you are looking for a new challenge as software engineer in an agile international team and want to contribute to expanding a successful life sciences company by translating technological features into customer benefits, we should get to know each other!

For our software development team in **Innsbruck, Austria**, we are looking for you to join us **at the next possible date, preferably** in a **permanent full-time position** as

Java Software Engineer (m/f/d)

Your role as Software Engineer (m/f/d)

- Work in close cooperation with analytical scientists, biologists, IT and customer support specialists
- As full-stack developer, you will be responsible for the whole software lifecycle
- Participate in requirement analysis, design, implementation and testing of software products
- Contribute to the maintenance and enhancement of the database backend
- Perform roll-outs of new product releases
- Provide 3rd level software support

Your profile as Software Engineer (m/f/d)

- University degree in informatics, ideally bioinformatics or medical informatics or other track record
- Organised, quality aware and the ability to work as part of a team
- Excellent problem-solving skills
- Professional experience in object-oriented software development of Java applications
- Candidates having professional experience with Spring and React will be preferred
- Profound knowledge of software testing and quality management are a plus
- Experience with relational database systems and SQL will be preferred
- Fluency in English is mandatory as you are working in an international as well as interdisciplinary team

Our offer to you

- As our new software engineer you will become part of a fast-paced field of technology and the world market leader in metabolomics
- Attractive remuneration topped up with social benefits
- State-of-the-art technical equipment and an agile working environment to ensure the cutting-edge research we aim for can be conducted
- Steep learning curve through close cooperation with our research experts
- Modern facility in the pleasant city of Innsbruck with good connection to public transport and company parking lots

About BIOCRATES Life Sciences AG

Biocrates is one of the world's leading companies for targeted metabolite analysis products and services. Based in Innsbruck and with a subsidiary in the US, the company provides user-friendly and ready-to-measure kits for quantitative metabolite analysis. As a result, research laboratories have access to efficient metabolomics. Possible application areas include human and animal health, nutrition, feed and microbiome.
