Metabolomics as a biomarker technology in pharmaceutical R&D

Virtual event, May 24, 2022, 4:00 pm CST (10:00 am EST)

Join us at our virtual event focused on metabolomics and drug development highlighting contributions by Isabella Gashaw (Boehringer Ingelheim, Germany), Anna Halama (Weill Cornell Medicine, Qatar) and Stefan Ledinger (biocrates, Austria). They will discuss how metabolomics can contribute to successful drug development, including multi-omics approaches, and strategies for overcoming drug resistance.

ASMS 2022

June 5-9, 2022, Minneapolis

Come by and visit the biocrates team at booth 618 to learn about the latest advancements in targeted metabolomics. If you have a poster or talk using our technology, we would love to promote your work on social media.

Please contact us at christina.abdi@biocrates.com and include the title, authors and "novel aspect" portion of the abstract.

Metabolite of the month

Cortisol

In this section, our scientists look at one specific metabolite each month. Topics of discussion include the biosynthesis role in a broader health context, and the effect of dysregulation. In this month's article, we took a closer look at cortisol, a steroid hormone involved in stress response and beyond.
