Metabolite stability with dried blood sampling methods

Using Mitra® tips for quantitative metabolomics

Remote sampling, with a specific focus on dried blood samples, seamlessly aligns with the future vision of medicine, encapsulating a scalable, cost-effective, and convenient approach to personalized healthcare. Our latest application note explores the reliability of this approach while enhancing stability and minimizing hematocrit bias using Mitra® tips.

Revolutionizing Health Assessment and the Future of Personalized Medicine

Coverstory

Recently, biocrates CEO Moritz Seuster discussed the company's transformative journey and its vision for the future of health in an interview with Insights Care magazine. Read the article in which he highlighted the critical role of metabolomics in reshaping the diagnostics and personalized medicine landscape.

Metabolite of the month

3-indoleacetic acid (3-IAA)

In this section, our scientists look at one specific metabolite each month.

Topics of discussion include the biosynthesis and degradation in a broader health context, and the effect of dysregulation. In this month's article, they took a closer look at 3-IAA, a microbial metabolite of tryptophan.

Events

biocrates March events center around the microbiome, providing opportunities for connection and discussion within this crucial scientific area. Join us at the following:

[75th Mosbacher Kolloquium - The Microbiome Gut Microbiota for Health World Summit](#)
[Translational Microbiome Conference](#)

We are looking forward to seeing you there!
