All-in-one solution for metabolomics workflow

WebIDQ streamlines metabolomics research with a complete workflow solution, from sample registration to statistical data analysis. Designed for the cloud, WebIDQ offers intelligent project management, precise quantification, and innovative features like AI-driven automated peak picking and built-in metabolism indicators. WebIDQ is required to run biocrates kits and available in various subscription models*.

Advantage of the cloud

- Worry-free environment – Automated updates and secure backups
- Data security – Compliant with privacy laws to protect data
- Complete control – FAIR-compliant with full data ownership

Ease of use

- Intuitive interface – Guided workflows for efficient use
- Project management – Easy sample registration and plate layout customization
- Visualization tools – Performance evaluation and quality monitoring

Advanced workflow and features

- AI-driven peak picking – Assisted identification, integration & quantification
- MetaboINDICATOR – Calculates biologically relevant sums and ratios
- Statistical analysis – Perform descriptive statistics, ANOVA, and PCA

biocrates ecosystem

- Easy access – Available through mybiocrates portal
- User control – Organize users and control access rights
- Collaborative workflows – Share projects across users within an organization

WebIDQ key features*

AI-driven peak picking

Accelerate data processing and eliminate errors in peak identification and integration

WebIDQ statistics

Perform statistical analysis directly after data processing in a single intuitive platform

Expanded MetaboINDICATOR

Transform metabolomic and lipidomic data into meaningful biological insights

Quality monitoring

Elevate performance evaluation and confidence in quality of analytical data

*Features dependent on subscription plan
